Rajiv Gandhi Institute of Technology, Kottayam

People are always interested in doing craft work now a days especially when lockdown struck. Boredom have made them to show their talent through art works. But the fact is that this talents are just showcased in their own house. Our project entitled "cutNdraw " is giving them a platform to show their talent. "cutNdraw" is a Web Application which acts as a trading platform focused on buying and selling handmade or vintage items and craft supplies. These items fall under a wide range of categories, including bags, clothing, home décor, toys, art, as well as craft supplies and tools. This is a platform which connects buyer and seller easily for trading purposes. This works as an E-commerce site where customers can add their own hand made products. Our Project consist of four modules: Admin, Buyer, Seller, Verifier. Here Everyone could upload their product and these Products are verified by the admin. Buyers browse the Web Application and can select a product and could contact the seller. The product is send via courier. The front end of our Web Application includes React.js and back end is Express.js.
